FEDERAL OPERATING PERMIT

A FEDERAL OPERATING PERMIT IS HEREBY ISSUED TO Holcim (US) Inc.

AUTHORIZING THE OPERATION OF Holcim US Midlothian Plant Midlothian Plant Cement Manufacturing

LOCATED AT

Ellis County, Texas Latitude 32° 30' 38" Longitude 96° 58' 40" Regulated Entity Number: RN100219286

This permit is issued in accordance with and subject to the Texas Clean Air Act (TCAA), Chapter 382 of the Texas Health and Safety Code and Title 30 Texas Administrative Code Chapter 122 (30 TAC Chapter 122), Federal Operating Permits. Under 30 TAC Chapter 122, this permit constitutes the permit holder's authority to operate the site and emission units listed in this permit. Operations of the site and emission units listed in this permit are subject to all additional rules or amended rules and orders of the Commission pursuant to the TCAA.

This permit does not relieve the permit holder from the responsibility of obtaining New Source Review authorization for new, modified, or existing facilities in accordance with 30 TAC Chapter 116, Control of Air Pollution by Permits for New Construction or Modification.

The site and emission units authorized by this permit shall be operated in accordance with 30 TAC Chapter 122, the general terms and conditions, special terms and conditions, and attachments contained herein.

This permit shall expire five years from the date of issuance. The renewal requirements specified in 30 TAC § 122.241 must be satisfied in order to renew the authorization to operate the site and emission units.

Permit No:	O1046	Issuance Date:	December 16, 2020

General Terms and Conditions

The permit holder shall comply with all terms and conditions contained in 30 TAC § 122.143 (General Terms and Conditions), 30 TAC § 122.144 (Recordkeeping Terms and Conditions), 30 TAC § 122.145 (Reporting Terms and Conditions), and 30 TAC § 122.146 (Compliance Certification Terms and Conditions).

In accordance with 30 TAC § 122.144(1), records of required monitoring data and support information required by this permit, or any applicable requirement codified in this permit, are required to be maintained for a period of five years from the date of the monitoring report, sample, or application unless a longer data retention period is specified in an applicable requirement. The five year record retention period supersedes any less stringent retention requirement that may be specified in a condition of a permit identified in the New Source Review Authorization attachment.

If the permit holder chooses to demonstrate that this permit is no longer required, a written request to void this permit shall be submitted to the Texas Commission on Environmental Quality (TCEQ) by the Responsible Official in accordance with 30 TAC § 122.161(e). The permit holder shall comply with the permit's requirements, including compliance certification and deviation reporting, until notified by the TCEQ that this permit is voided.

The permit holder shall comply with 30 TAC Chapter 116 by obtaining a New Source Review authorization prior to new construction or modification of emission units located in the area covered by this permit.

All reports required by this permit must include in the submittal a cover letter which identifies the following information: company name, TCEQ regulated entity number, air account number (if assigned), site name, area name (if applicable), and Air Permits Division permit number(s).

Special Terms and Conditions:

Emission Limitations and Standards, Monitoring and Testing, and Recordkeeping and Reporting

- 1. Permit holder shall comply with the following requirements:
 - A. Emission units (including groups and processes) in the Applicable Requirements Summary attachment shall meet the limitations, standards, equipment specifications, monitoring, recordkeeping, reporting, testing, and other requirements listed in the Applicable Requirements Summary attachment to assure compliance with the permit.
 - B. The textual description in the column titled "Textual Description" in the Applicable Requirements Summary attachment is not enforceable and is not deemed as a substitute for the actual regulatory language. The Textual Description is provided for information purposes only.
 - C. A citation listed on the Applicable Requirements Summary attachment, which has a notation [G] listed before it, shall include the referenced section and subsection for all commission rules, or paragraphs for all federal and state regulations and all subordinate paragraphs, subparagraphs and clauses, subclauses, and items contained within the referenced citation as applicable requirements.
 - D. When a grouped citation, notated with a [G] in the Applicable Requirements Summary, contains multiple compliance options, the permit holder must keep records of when each compliance option was used.

- E. Emission units subject to 40 CFR Part 63, Subpart LLL as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, § 113.690 which incorporates the 40 CFR Part 63 Subpart by reference.
- F. Emission units subject to 40 CFR Part 63, Subpart ZZZZ as identified in the attached Applicable Requirements Summary table are subject to 30 TAC Chapter 113, Subchapter C, §113.1090 which incorporates the 40 CFR Part 63 Subpart by reference.
- 2. The permit holder shall comply with the following sections of 30 TAC Chapter 101 (General Air Quality Rules):
 - A. Title 30 TAC § 101.1 (relating to Definitions), insofar as the terms defined in this section are used to define the terms used in other applicable requirements
 - B. Title 30 TAC § 101.3 (relating to Circumvention)
 - C. Title 30 TAC § 101.8 (relating to Sampling), if such action has been requested by the TCEQ
 - D. Title 30 TAC § 101.9 (relating to Sampling Ports), if such action has been requested by the TCEQ
 - E. Title 30 TAC § 101.10 (relating to Emissions Inventory Requirements)
 - F. Title 30 TAC § 101.201 (relating to Emission Event Reporting and Recordkeeping Requirements)
 - G. Title 30 TAC § 101.211 (relating to Scheduled Maintenance, Start-up, and Shutdown Reporting and Recordkeeping Requirements)
 - H. Title 30 TAC § 101.221 (relating to Operational Requirements)
 - I. Title 30 TAC § 101.222 (relating to Demonstrations)
 - J. Title 30 TAC § 101.223 (relating to Actions to Reduce Excessive Emissions)
- 3. Permit holder shall comply with the following requirements of 30 TAC Chapter 111:
 - A. Visible emissions from stationary vents with a flow rate of less than 100,000 actual cubic feet per minute and constructed after January 31, 1972 that are not listed in the Applicable Requirements Summary attachment for 30 TAC Chapter 111, Subchapter A, Division 1, shall not exceed 20% opacity averaged over a six-minute period. The permit holder shall comply with the following requirements for stationary vents at the site subject to this standard:
 - (i) Title 30 TAC § 111.111(a)(1)(B) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(1)(E)
 - (iii) Title 30 TAC § 111.111(a)(1)(F)(i), (ii), (iii), or (iv)
 - (iv) For emission units with vent emissions subject to 30 TAC § 111.111(a)(1)(B), complying with 30 TAC § 111.111(a)(1)(F)(ii), (iii), or (iv), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic

monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146. These periodic monitoring requirements do not apply to vents that are not capable of producing visible emissions such as vents that emit only colorless VOCs; vents from non-fuming liquids; vents that provide passive ventilation, such as plumbing vents; or vent emissions from any other source that does not obstruct the transmission of light. Vents, as specified in the "Applicable Requirements Summary" attachment, that are subject to the emission limitation of 30 TAC § 111.111(a)(1)(B) are not subject to the following periodic monitoring requirements:

- (1) An observation of stationary vents from emission units in operation shall be conducted at least once during each calendar quarter unless the emission unit is not operating for the entire quarter.
- (2) For stationary vents from a combustion source, if an alternative to the normally fired fuel is fired for a period greater than or equal to 24 consecutive hours, the permit holder shall conduct an observation of the stationary vent for each such period to determine if visible emissions are present. If such period is greater than 3 months, observations shall be conducted once during each quarter. Supplementing the normally fired fuel with natural gas or fuel gas to increase the net heating value to the minimum required value does not constitute creation of an alternative fuel.
- (3) Records of all observations shall be maintained.
- (4) Visible emissions observations of emission units operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of emission units operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions observations shall be made during times when the activities described in 30 TAC § 111.111(a)(1)(E) are not taking place. Visible emissions shall be determined with each stationary vent in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each stationary vent during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.
- (5) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(1) and (a)(1)(B).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under

30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(1)(F) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.

- (c) Some vents may be subject to multiple visible emission or monitoring requirements. All credible data must be considered when certifying compliance with this requirement even if the observation or monitoring was performed to demonstrate compliance with a different requirement.
- B. For visible emissions from a building, enclosed facility, or other structure; the permit holder shall comply with the following requirements:
 - (i) Title 30 TAC § 111.111(a)(7)(A) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(7)(B)(i) or (ii)
 - (iii) For a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source subject to 30 TAC § 111.111(a)(7)(A), complying with 30 TAC § 111.111(a)(7)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a building containing an air emission source, enclosed facility, or other structure containing or associated with an air emission source which is required to comply with 30 TAC § 111.111(a)(7)(A) shall be conducted at least once during each calendar quarter unless the air emission source or enclosed facility is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of air emission sources or enclosed facilities operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of air emission sources or enclosed facilities operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each emissions outlet in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 mile, away from each emissions outlet during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which

condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

- (4) Compliance Certification:
 - (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(7) and (a)(7)(A).
 - (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(7)(B) as soon as practicable, but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- C. For visible emissions from all other sources not specified in 30 TAC § 111.111(a)(1), (4), or (7); the permit holder shall comply with the following requirements:
 - (i) Title 30 TAC § 111.111(a)(8)(A) (relating to Requirements for Specified Sources)
 - (ii) Title 30 TAC § 111.111(a)(8)(B)(i) or (ii)
 - (iii) For a source subject to 30 TAC § 111.111(a)(8)(A), complying with 30 TAC § 111.111(a)(8)(B)(i) or (ii), and capable of producing visible emissions from, but not limited to, particulate matter, acid gases and NO_x, the permit holder shall also comply with the following periodic monitoring requirements for the purpose of annual compliance certification under 30 TAC § 122.146:
 - (1) An observation of visible emissions from a source which is required to comply with 30 TAC § 111.111(a)(8)(A) shall be conducted at least once during each calendar quarter unless the source is not operating for the entire quarter.
 - (2) Records of all observations shall be maintained.
 - (3) Visible emissions observations of sources operated during daylight hours shall be conducted no earlier than one hour after sunrise and no later than one hour before sunset. Visible emissions observations of sources operated only at night must be made with additional lighting and the temporary installation of contrasting backgrounds. Visible emissions shall be determined with each source in clear view of the observer. The

observer shall be at least 15 feet, but not more than 0.25 mile, away from each source during the observation. For outdoor locations, the observer shall select a position where the sun is not directly in the observer's eyes. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor. A certified opacity reader is not required for visible emissions observations.

(4) Compliance Certification:

- (a) If visible emissions are not present during the observation, the RO may certify that the source is in compliance with the applicable opacity requirement in 30 TAC § 111.111(a)(8) and (a)(8)(A)
- (b) However, if visible emissions are present during the observation, the permit holder shall either list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2) or conduct the appropriate opacity test specified in 30 TAC § 111.111(a)(8)(B) as soon as practicable. but no later than 24 hours after observing visible emissions to determine if the source is in compliance with the opacity requirements. If an opacity test is performed and the source is determined to be in compliance, the RO may certify that the source is in compliance with the applicable opacity requirement. However, if an opacity test is performed and the source is determined to be out of compliance, the permit holder shall list this occurrence as a deviation on the next deviation report as required under 30 TAC § 122.145(2). The opacity test must be performed by a certified opacity reader.
- D. Certification of opacity readers determining opacities under Method 9 (as outlined in 40 CFR Part 60, Appendix A) to comply with opacity monitoring requirements shall be accomplished by completing the Visible Emissions Evaluators Course, or approved agency equivalent, no more than 180 days before the opacity reading.
- E. For emission units with contributions from uncombined water, the permit holder shall comply with the requirements of 30 TAC § 111.111(b).
- F. Emission limits on nonagricultural processes, except for the steam generators specified in 30 TAC § 111.153, shall comply with the following requirements:
 - (i) Emissions of PM from any source may not exceed the allowable rates as required in 30 TAC § 111.151(a) (relating to Allowable Emissions Limits)
 - (ii) Sources with an effective stack height (h_e) less than the standard effective stack height (H_e), must reduce the allowable emission level by multiplying it by [h_e/H_e]² as required in 30 TAC § 111.151(b)
 - (iii) Effective stack height shall be calculated by the equation specified in 30 TAC § 111.151(c)

- 4. For storage vessels maintaining working pressure as specified in 30 TAC Chapter 115, Subchapter B, Division 1: Storage of Volatile Organic Compounds, the permit holder shall comply with the requirements of 30 TAC § 115.112(e)(1).
- 5. Permit holder shall comply with the following 30 TAC Chapter 115, Subchapter C requirements:
 - A. When filling stationary gasoline storage vessels (Stage I) for motor vehicle fuel dispensing facilities specified in 30 TAC Chapter 115, Subchapter C, the permit holder shall comply with the following requirements:
 - (i) Title 30 TAC § 115.221 (relating to Emission Specifications)
 - (ii) Title 30 TAC § 115.222 (relating to Control Requirements)
 - (iii) Title 30 TAC § 115.223 (relating to Alternate Control Requirements)
 - (iv) Title 30 TAC § 115.224 (relating to Inspection Requirements)
 - (v) Title 30 TAC § 115.225 (relating to Testing Requirements)
 - (vi) Title 30 TAC § 115.226 (relating to Recordkeeping Requirements)
- 6. The permit holder shall comply with the following requirements for units subject to any subpart of 40 CFR Part 60, unless otherwise stated in the applicable subpart:
 - A. Title 40 CFR § 60.7 (relating to Notification and Recordkeeping)
 - B. Title 40 CFR § 60.8 (relating to Performance Tests)
 - C. Title 40 CFR § 60.11 (relating to Compliance with Standards and Maintenance Requirements)
 - D. Title 40 CFR § 60.12 (relating to Circumvention)
 - E. Title 40 CFR § 60.13 (relating to Monitoring Requirements)
 - F. Title 40 CFR § 60.14 (relating to Modification)
 - G. Title 40 CFR § 60.15 (relating to Reconstruction)
 - H. Title 40 CFR § 60.19 (relating to General Notification and Reporting Requirements)
- 7. For open storage piles; including equipment used in loading, unloading, and conveying operations; constructed, reconstructed, or modified after May 27, 2009, the permit holder shall comply with the following requirements of 40 CFR Part 60, Subpart Y for control of fugitive coal dust emissions:
 - A. Title 40 CFR § 60.254(c) and (c)(1) (relating to Standards for coal processing and conveying equipment, coal storage systems, transfer and loading systems, and open storage piles), for preparation of and operation in accordance with a fugitive coal dust emissions control plan
 - B. Title 40 CFR § 60.254(c)(2) and (c)(6) (relating to Standards for coal processing and conveying equipment, coal storage systems, transfer and loading systems, and open storage piles), for control measures for open coal storage piles

- C. Title 40 CFR § 60.254(c)(3) and (c)(3)(i) (iv) (relating to Standards for coal processing and conveying equipment, coal storage systems, transfer and loading systems, and open storage piles), for alternative control measures
- D. Title 40 CFR § 60.254(c)(4), (c)(4)(i) (ii), and (c)(5)(ii) (relating to Standards for coal processing and conveying equipment, coal storage systems, transfer and loading systems, and open storage piles) for submittal of the fugitive coal dust emissions control plan
- E. Title 40 CFR § 60.258(a) and (a)(6) (relating to Reporting and recordkeeping)
- 8. For the nonmetallic mineral processing operations specified in 40 CFR Part 60, Subpart OOO, the permit holder shall comply with the following requirements:
 - A. Title 40 CFR § 60.670(f) (relating to Applicability and Designation of Affected Facility), for Table 1 for Subpart A
 - B. Title 40 CFR § 60.673(a) (b) (relating to Reconstruction)
 - C. Title 40 CFR § 60.676(h) (relating to Reporting and Recordkeeping)
- 9. The permit holder shall comply with the requirements of 30 TAC Chapter 113, Subchapter C, § 113.100 for units subject to any subpart of 40 CFR Part 63, unless otherwise stated in the applicable subpart.
- 10. For open clinker storage piles, the permit holder shall comply with the following requirements of 40 CFR Part 63, Subpart LLL for control of fugitive dust emissions:
 - A. Title 40 CFR § 63.1343(c) and (c)(1) (relating to Standards for kilns, clinker coolers, raw material dryers, and open clinker storage piles), for preparation of and operation in accordance with fugitive dust emissions control measures in an operation and maintenance plan.
 - B. Title 40 CFR § 60.1343(c)(2) (relating to Standards for kilns, clinker coolers, raw material dryers, and open clinker storage piles), for control measures for open clinker storage piles.
 - C. Title 40 CFR § 60.1343(c)(3) (relating to Standards for kilns, clinker coolers, raw material dryers, and open clinker storage piles), for cleanup of temporary clinker piles.

Additional Monitoring Requirements

- 11. Unless otherwise specified, the permit holder shall comply with the compliance assurance monitoring requirements as specified in the attached "CAM Summary" upon issuance of the permit. In addition, the permit holder shall comply with the following:
 - A. The permit holder shall comply with the terms and conditions contained in 30 TAC § 122.147 (General Terms and Conditions for Compliance Assurance Monitoring).
 - B. The permit holder shall report, consistent with the averaging time identified in the "CAM Summary," deviations as defined by the deviation limit in the "CAM Summary." Any monitoring data below a minimum limit or above a maximum limit, that is collected in accordance with the requirements specified in 40 CFR § 64.7(c), shall be reported as a

- deviation. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).
- C. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "CAM Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances in order to avoid reporting deviations. All monitoring data shall be collected in accordance with the requirements specified in 40 CFR § 64.7(c).
- D. The permit holder shall operate the monitoring, identified in the attached "CAM Summary," in accordance with the provisions of 40 CFR § 64.7.
- E. The permit holder shall comply with either of the following requirements for any particulate matter capture system associated with the control device subject to CAM. If the results of the following inspections indicate that the capture system is not working properly, the permit holder shall promptly take necessary corrective action:
 - (i) Once per year the permit holder shall inspect any fan for proper operation and inspect the capture system used in compliance of CAM for cracks, holes, tears, and other defects; or
 - (ii) Once per year, the permit holder shall inspect for fugitive emissions escaping from the capture system in compliance of CAM by performing a visible emissions observation for a period of at least six minutes in accordance with 40 CFR Part 60, Appendix A, Test Method 22.
- F. The permit holder shall comply with the requirements of 40 CFR § 70.6(a)(3)(ii)(A) and 30 TAC § 122.144(1)(A)-(F) for documentation of all required inspections.
- 12. The permit holder shall comply with the periodic monitoring requirements as specified in the attached "Periodic Monitoring Summary" upon issuance of the permit. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permit holder shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. The permit holder may elect to collect monitoring data on a more frequent basis and average the data, consistent with the averaging time or minimum frequency specified in the "Periodic Monitoring Summary," for purposes of determining whether a deviation has occurred. However, the additional data points must be collected on a regular basis. In no event shall data be collected and used in particular instances to avoid reporting deviations. Deviations shall be reported according to 30 TAC § 122.145 (Reporting Terms and Conditions).

New Source Review Authorization Requirements

- 13. Permit holder shall comply with the requirements of New Source Review authorizations issued or claimed by the permit holder for the permitted area, including permits, permits by rule, standard permits, flexible permits, special permits, permits for existing facilities including Voluntary Emissions Reduction Permits and Electric Generating Facility Permits issued under 30 TAC Chapter 116, Subchapter I, or special exemptions referenced in the New Source Review Authorization References attachment. These requirements:
 - A. Are incorporated by reference into this permit as applicable requirements

- B. Shall be located with this operating permit
- C. Are not eligible for a permit shield
- 14. The permit holder shall comply with the general requirements of 30 TAC Chapter 106, Subchapter A or the general requirements, if any, in effect at the time of the claim of any PBR.
- 15. The permit holder shall maintain records to demonstrate compliance with any emission limitation or standard that is specified in a permit by rule (PBR) or Standard Permit listed in the New Source Review Authorizations attachment. The records shall yield reliable data from the relevant time period that are representative of the emission unit's compliance with the PBR or Standard Permit. These records may include, but are not limited to, production capacity and throughput, hours of operation, safety data sheets (SDS), chemical composition of raw materials, speciation of air contaminant data, engineering calculations, maintenance records, fugitive data, performance tests, capture/control device efficiencies, direct pollutant monitoring (CEMS, COMS, or PEMS), or control device parametric monitoring. These records shall be made readily accessible and available as required by 30 TAC § 122.144. Any monitoring or recordkeeping data indicating noncompliance with the PBR or Standard Permit shall be considered and reported as a deviation according to 30 TAC § 122.145 (Reporting Terms and Conditions).
- 16. The permit holder shall comply with the following requirements for Air Quality Standard Permits:
 - A. Registration requirements listed in 30 TAC § 116.611, unless otherwise provided for in an Air Quality Standard Permit
 - B. General Conditions listed in 30 TAC § 116.615, unless otherwise provided for in an Air Quality Standard Permit
 - C. Requirements of the non-rule Air Quality Standard Permit for Pollution Control Projects

Compliance Requirements

- 17. The permit holder shall certify compliance in accordance with 30 TAC § 122.146. The permit holder shall comply with 30 TAC § 122.146 using at a minimum, but not limited to, the continuous or intermittent compliance method data from monitoring, recordkeeping, reporting, or testing required by the permit and any other credible evidence or information. The certification period may not exceed 12 months and the certification must be submitted within 30 days after the end of the period being certified.
- 18. Permit holder shall comply with the following 30 TAC Chapter 117 requirements:
 - A. The permit holder shall comply with the compliance schedules and submit written notification to the TCEQ Executive Director as required in 30 TAC Chapter 117, Subchapter H, Division 1:
 - (i) For sources in the Dallas-Fort Worth Eight-Hour Nonattainment area, 30 TAC § 117,9030
 - B. The permit holder shall comply with the Initial Control Plan unit identification requirements in 30 TAC § 117.450(a) and (a)(1)-(7).
 - C. The permit holder shall comply with the requirements of 30 TAC § 117.452 for Final Control Plan Procedures for Reasonably Available Control Technology (RACT) and 30 TAC § 117.456 for Revision of Final Control Plan.

- D. The permit holder shall comply with the requirements of 30 TAC § 117.454 for Final Control Plan Procedures for Attainment Demonstration Emission Specifications and 30 TAC § 117.456 for Revision of Final Control Plan.
- E. The permit holder shall comply with the requirement in 30 TAC § 117.450(b) for identification of exempt units in the Initial Control Plan.
- F. The permit holder shall comply with the compliance schedule as required in 30 TAC § 117.9320 for cement kilns.
- 19. Use of Emission Credits to comply with applicable requirements:
 - A. Unless otherwise prohibited, the permit holder may use emission credits to comply with the following applicable requirements listed elsewhere in this permit:
 - (i) Title 30 TAC Chapter 115
 - (ii) Title 30 TAC Chapter 117
 - (iii) Offsets for Title 30 TAC Chapter 116
 - B. The permit holder shall comply with the following requirements in order to use the emission credits to comply with the applicable requirements:
 - (i) The permit holder must notify the TCEQ according to 30 TAC § 101.306(c)-(d)
 - (ii) The emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 1
 - (iii) The executive director has approved the use of the credit according to 30 TAC § 101.306(c)-(d)
 - (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.302(g) and 30 TAC Chapter 122
 - (v) Title 30 TAC § 101.305 (relating to Emission Reductions Achieved Outside the United States)
- 20. Use of Discrete Emission Credits to comply with the applicable requirements:
 - A. Unless otherwise prohibited, the permit holder may use discrete emission credits to comply with the following applicable requirements listed elsewhere in this permit:
 - (i) Title 30 TAC Chapter 115
 - (ii) Title 30 TAC Chapter 117
 - (iii) If applicable, offsets for Title 30 TAC Chapter 116
 - (iv) Temporarily exceed state NSR permit allowables
 - B. The permit holder shall comply with the following requirements in order to use the credit to comply with the applicable requirements:

- (i) The permit holder must notify the TCEQ according to 30 TAC § 101.376(d)
- (ii) The discrete emission credits to be used must meet all the geographic, timeliness, applicable pollutant type, and availability requirements listed in 30 TAC Chapter 101, Subchapter H, Division 4
- (iii) The executive director has approved the use of the discrete emission credits according to 30 TAC § 101.376(d)(1)(A)
- (iv) The permit holder keeps records of the use of credits towards compliance with the applicable requirements in accordance with 30 TAC § 101.372(h) and 30 TAC Chapter 122
- (v) Title 30 TAC § 101.375 (relating to Emission Reductions Achieved Outside the United States)

Protection of Stratospheric Ozone

- 21. Permit holders at a site subject to Title VI of the FCAA Amendments shall meet the following requirements for protection of stratospheric ozone:
 - A. Any on site servicing, maintenance, and repair on refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants or non-exempt substitutes shall be conducted in accordance with 40 CFR Part 82, Subpart F. Permit holders shall ensure that repairs on or refrigerant removal from refrigeration and nonmotor vehicle air-conditioning appliances using ozone-depleting refrigerants are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart F.
 - B. Any on site servicing, maintenance, and repair of fleet vehicle air conditioning using ozone-depleting refrigerants shall be conducted in accordance with 40 CFR Part 82, Subpart B. Permit holders shall ensure that repairs or refrigerant removal are performed only by properly certified technicians using certified equipment. Records shall be maintained as required by 40 CFR Part 82, Subpart B.

Alternative Requirements

22. The permit holder shall comply with the approved alternative means of control (AMOC); alternative monitoring, recordkeeping, or reporting requirements; or requirements determined to be equivalent to an otherwise applicable requirement contained in the Alternative Requirements attachment of this permit. Units complying with an approved alternative requirement have reference to the approval in the Applicable Requirements summary listing for the unit. The permit holder shall maintain the original documentation, from the TCEQ Executive Director, demonstrating the method or limitation utilized. Documentation shall be maintained and made available in accordance with 30 TAC § 122.144.

Permit Location

23. The permit holder shall maintain a copy of this permit and records related to requirements listed in this permit on site.

Permit Shield (30 TAC § 122.148)

24. A permit shield is granted for the emission units, groups, or processes specified in the attached "Permit Shield." Compliance with the conditions of the permit shall be deemed compliance with

the specified potentially applicable requirements or specified potentially applicable state-only requirements listed in the attachment "Permit Shield." Permit shield provisions shall not be modified by the executive director until notification is provided to the permit holder. No later than 90 days after notification of a change in a determination made by the executive director, the permit holder shall apply for the appropriate permit revision to reflect the new determination. Provisional terms are not eligible for this permit shield. Any term or condition, under a permit shield, shall not be protected by the permit shield if it is replaced by a provisional term or condition or the basis of the term and condition changes.

Unit Summary	16
Applicable Requirements Summary	41

Note: A "none" entry may be noted for some emission sources in this permit's "Applicable Requirements Summary" under the heading of "Monitoring and Testing Requirements" and/or "Recordkeeping Requirements" and/or "Reporting Requirements." Such a notation indicates that there are no requirements for the indicated emission source as identified under the respective column heading(s) for the stated portion of the regulation when the emission source is operating under the conditions of the specified SOP Index Number. However, other relevant requirements pursuant to 30 TAC Chapter 122 including Recordkeeping Terms and Conditions (30 TAC § 122.144), Reporting Terms and Conditions (30 TAC § 122.145), and Compliance Certification Terms and Conditions (30 TAC § 122.146) continue to apply.

Monitoring Information		
Indicator: Visible emissions		
Minimum Frequency: See Periodic Monitoring Text below		
Averaging Period: N/A		
Deviation Limit: Maximum opacity = 7% averaged over a 6 minute period		

Periodic Monitoring Text: The owner or operator must conduct a monthly 1-minute visible emissions test of each affected source in accordance with Method 22 of Appendix A to part 60 of this chapter. The test must be conducted while the affected source is in operation. If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If a Test Method 9 is performed, the opacity limit is the corresponding opacity limit associated with the particulate matter standard in the underlying applicable requirement.

If no visible emissions are observed in six consecutive monthly tests for any affected source, the owner or operator may decrease the frequency of testing from monthly to semi-annual for that affected source. If visible emissions are observed during any semi-annual test, the owner or operator must resume testing of that affected source on a monthly basis and maintain that schedule until no visible emissions are observed in six consecutive monthly tests.

Pollutant: Opacity	Main Standard: § 111.111(a)(1)(C)		
Monitoring Information			
Indicator: PM CPMS output or opacity			
Minimum Frequency: Once every 15 minutes			
Averaging Period: 30 process operating day rolling average			
Deviation Limit: Greater than 10% opacity when using a Particulate Matter Continuous Parametric Monitoring System (PM CPMS)			

Periodic Monitoring Text: A PM CPMS that has passed the initial certification requirements of 40 CFR Part 63, Subpart LLL may be used for compliance determinations as follows. If the CPMS indicates an exceedance of the site specific operating limit established per 40 CFR 63 Subpart LLL PM emission compliance, a visible emission observation shall be performed within 24 hours.

The visible emission determination must be made in accordance with 40 CFR Part 60, Appendix A, Test Method 22. The observation period when conducting Method 22 shall extend for at least one minute during normal operations. Contributions from uncombined water shall not be included in determining compliance with this condition.

If visible emissions are observed, then the permit holder must conduct a six-minute test of opacity in accordance with 40 CFR Part 60 Appendix A, Test Method 9. The Method 9 test must begin within one hour of any observation of visible emissions.

Monitoring Information			
Indicator: Visible Emissions			

Minimum Frequency: See PM text

Averaging Period: Six minutes for Method 22

Deviation Limit: Visible Emissions or Maximum Opacity = 15% averaged over a thirty-minute period

Periodic Monitoring Text: Daily visible emissions observations shall be performed in accordance with the MACT LLL O&M plan.

Conduct a daily 6-minute visible emissions test of each affected source in accordance with Method 22 of Appendix A of 40 CFR Part 60.

Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission sources during the observation. The observer shall select a position where the sun is not directly in the observer's eyes.

If visible emissions are observed, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. The duration of the Method 9 test must be 30 minutes. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.

Monitoring Information			
Indicator: Visible Emissions			
Minimum Frequency: Monthly			
Averaging Period: N/A			
Deviation Limit: If the repair is not conducted within 15 calendar days, it shall be reported as a deviation.			

Periodic Monitoring Text: All equipment (water sprays, environmentally sensitive chemical sprays, ducts, hoods, sleeves, etc.) utilized to limit fugitive emissions shall be maintained in good working order. All equipment shall be visually checked and maintained free of holes, cracks, or other conditions (especially blockages or other problems associated with of water/chemical spray systems) that would reduce the equipment effectiveness to limit fugitive emissions. The results of all visual checks and corrective action performed shall be recorded and maintained in a log along with the date of the activity. If holes, cracks, or other conditions (that would reduce the equipment effectiveness to limit fugitive emissions) are discovered during visual inspection, the repairs shall be conducted within 15 calendar days. If the repair is not conducted within 15 calendar days, it shall be reported as a deviation.

Minimum Frequency: once per week			
Averaging Period: n/a			
Deviation Limit: Maximum Opacity = 15% averaged over a six-minute period			

Periodic Monitoring Text: Visible emissions observations shall be made and recorded. Note that to properly determine the presence of visible emissions, all sources must be in clear view of the observer. The observer shall be at least 15 feet, but not more than 0.25 miles, away from the emission source during the observation. The observer shall select a position where the sun is not directly in the observer's eyes. If the observations cannot be conducted due to weather conditions, the date, time, and specific weather conditions shall be recorded. When condensed water vapor is present within the plume, as it emerges from the emissions outlet, observations must be made beyond the point in the plume at which condensed water vapor is no longer visible. When water vapor within the plume condenses and becomes visible at a distance from the emissions outlet, the observation shall be evaluated at the outlet prior to condensation of water vapor.

If visible emissions are observed, the permit holder shall report a deviation. As an alternative, the permit holder may determine the opacity consistent with Test Method 9, as soon as practicable, but no later than 24 hours after observing visible emissions. If the result of the Test Method 9 is opacity above the opacity limit in the applicable requirement, the permit holder shall report a deviation.

Permit Shield	9

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
EMERGGEN1	N/A	40 CFR Part 60, Subpart IIII	Engine construction/reconstruction commenced prior to July 11, 2005.
EMERGGEN1	N/A	40 CFR Part 63, Subpart ZZZZ	Existing emergency engine located at a major source of HAP emissions with a horsepower greater than 500 hp.
EMERGGEN2	N/A	40 CFR Part 60, Subpart IIII	Engine construction/reconstruction commenced prior to July 11, 2005.
EMERGGEN2	N/A	40 CFR Part 63, Subpart ZZZZ	Existing emergency engine located at a major source of HAP emissions with a horsepower greater than 500 hp.
F20-FT1	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Motor vehicle fuel dispensing operation.
F20-FT1	N/A	30 TAC Chapter 115, Storage of VOCs	Storage container that has a capacity of less than 25,000 gallons (94,625 liters) located at motor vehicle fuel dispensing facilities.
F20-FT1	N/A	40 CFR Part 60, Subpart Kb	The tank's capacity is less than 75 cubic meters.
F20-FT2	N/A	40 CFR Part 60, Subpart Kb	The tank's capacity is less than 75m3.
GRP-TNKOCL	FUG-1A*, FUG-1B*, FUG-1G*	40 CFR Part 60, Subpart Kb	Each tank's capacity is greater than 151 m3 and the maximum true vapor pressure of each tank's contents is less than 3.5 kPa.
HEATER1	N/A	30 TAC Chapter 117, Subchapter B	Heater is < 5.0 MMBtu/hr
HEATER2	N/A	30 TAC Chapter 117, Subchapter B	Heater is < 5.0 MMBtu/hr
PONDPUMP	N/A	40 CFR Part 60, Subpart IIII	Engine construction/reconstruction commenced prior to July 11, 2005.

Permit Shield

The Executive Director of the TCEQ has determined that the permit holder is not required to comply with the specific regulation(s) identified for each emission unit, group, or process in this table.

Unit/Group/Process		Regulation	Basis of Determination
ID No.	Group/Inclusive Units		
TNK10	N/A	30 TAC Chapter 115, Storage of VOCs	Storage container less than 1,000 gallons.
TNK10	N/A	40 CFR Part 60, Subpart Kb	The tank's capacity is less than 75 cubic meters.
ZDT-001	N/A	40 CFR Part 60, Subpart Kb	The tank's capacity is less than 75 cubic meters.
ZUT-001	N/A	30 TAC Chapter 115, Loading and Unloading of VOC	Motor vehicle fuel dispensing operation.
ZUT-001	N/A	30 TAC Chapter 115, Storage of VOCs	Storage container that has a capacity of less than 25,000 gallons (94,625 liters) located at motor vehicle fuel dispensing facility.
ZUT-001	N/A	40 CFR Part 60, Subpart Kb	The tank's capacity is less than 75 cubic meters.

Re: Permit Alteration

Permit Number: 8996 Portland Cement Kiln Midlothian, Ellis County

Regulated Entity Number: RN100219286 Customer Reference Number: CN601231459

Account Number: ED-0099-J

Dear Mr. Moser:

This is in response to your letter received May 1, 2009, requesting alteration of the representations of the above-referenced permit. We understand that you requested an alternate baseline for control of ammonia slip in accordance with Title 30 Texas Administrative Code § 117.3123 (30 TAC § 117.3123). You also requested an alternate monitoring strategy for monitoring ammonia slip as described in 30 TAC § 117.8130. We understand that you plan to utilize existing process monitors for continuous ammonia measurement in the stack and weekly span calibrations will be performed. Ammonia emissions shall not exceed more than one time per 12-month rolling period, a limit of 35 parts per million by volume at 7.0 percent oxygen, dry basis, on a 24-hour rolling average basis.

No planned maintenance, startup, and shutdown emissions have been reviewed or represented in this application and none are authorized by this permit.

As of July 1, 2008, all analytical data generated by a mobile or stationary laboratory in support of compliance with air permits must be obtained from a National Environmental Laboratory Accreditation Conference accredited laboratory under the Texas Laboratory Accreditation Program or meet one of several exemptions. Specific information concerning which laboratories must be accredited and which are exempt may be found in 30 TAC § 25.4 and § 25.6.

Mr. Michael Moser Page 2 February 9, 2010

Re: Permit Number 8996

For additional information regarding the laboratory accreditation program and a list of accredited laboratories and their fields of accreditation, please see the following Web site:

http://www.tceq.state.tx.us/compliance/compliance_support/qa/env_lab_accreditation.html

For questions regarding the accreditation program, you may contact the Texas Laboratory Accreditation Program at (512) 239-3754 or by e-mail at labprgms@tceq.state.tx.us.

Your cooperation in this matter is appreciated. If you need further information or have any questions, please contact Ms. Bridget Malone at (512) 239-4286 or write to the Texas Commission on Environmental Quality, Office of Permitting and Registration, Air Permits Division, MC-163, P.O. Box 13087, Austin, Texas 78711-3087.

This action is taken under authority delegated by the Executive Director of the Texas Commission on Environmental Quality.

Sincerely,

Steve Hagle, P.E., Director

Air Permits Division

Office of Permitting and Registration

- (1) Emission point identification either specific equipment designation or emission point number from plot plan.
- (2) Specific point source name. For fugitive sources, use area name or fugitive source name.
- (3) VOC volatile organic compounds as defined in Title 30 Texas Administrative Code §101.1

NO_x - total oxides of nitrogen

SO₂ - sulfur dioxide

PM - total particulate matter, suspended in the atmosphere, including PM_{10} and $PM_{2.5}$, as represented PM_{10} - total particulate matter equal to or less than 10 microns in diameter, including $PM_{2.5}$, as represented

PM_{2.5} - particulate matter equal to or less than 2.5 microns in diameter

CO - carbon monoxide

HAP - hazardous air pollutant listed in §112(b) of the Federal Clean Air Act or Title 40 Code of Federal Regulations (CFR) Part 63,

Subpart C

TRS - total reduced sulfur H₂SO₄ - sulfuric acid Speciated Compounds - See Attachment I

OHAP - organic hazardous air pollutants as defined in 40 CFR §63.1341

Total OHAP - sum of concentrations of compounds of formaldehyde, benzene, toluene, styrene, m-xylene, p-xylene, o-xylene, acetaldehyde, and naphthalene as measured by EPA Test Method 320 or Method 18, Appendix A, 40 CFR 60.

- (4) Planned maintenance, startup, and shutdown (MSS) emissions are included.
- (5) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period.
- (6) Demonstration of compliance with 30-day rolling limit begins on first day of stated period. The control period for the March 31 limit effectively begins on March 1. Reference: 30 TAC §117.3123.
- (7) Emission rate is an estimate and is enforceable through compliance with the applicable special conditions and permit application representations.
- (8) The hourly emission limit is based on a 30-day rolling emissions average. A 30-day rolling average is generated for each day as the average of all the day's hourly emission data and the preceding 29 days of hourly emission data (representing only those hours during kiln operation including all hours of planned maintenance, startup, and shutdown). The gaseous monitoring data shall be reduced to units of the permit allowable emission rate in lb/hr, calculated as a 30-day rolling average at least once every week.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

AN ORDER concerning the application by Holcim (US) Inc. for Air Quality Permit Nos. 8996 and PSDTX454M5; TCEQ Docket No. 2021-0051-AIR.

On March 31, 2021, the Texas Commission on Environmental Quality (Commission) considered during its open meeting several requests for hearing concerning the application by Holcim (US) Inc. (Applicant) for Air Quality Permit Nos. 8996 and PSDTX454M5, in Ellis County, Texas. The requests for hearing were evaluated under the requirements in the applicable statutes and Commission rules, including 30 Texas Administrative Code (TAC) Chapter 55. The Commission also considered the responses to the requests for hearing filed by the Applicant, Executive Director, and the Office of Public Interest Counsel; replies; all timely public comment; and the Executive Director's Response to Comment.

After evaluation of all relevant filings, the Commission denied all requests for hearing. The Commission also adopted the Executive Director's Response to Public Comment and approved the application of Holcim (US) Inc. for Air Quality Permit Nos. 8996 and PSDTX454M5, in the form as shown in the draft permit prepared by the Executive Director.

NOW, THEREFORE, BE IT ORDERED BY THE TEXAS COMMISSION ON ENVIRONMENTAL QUALITY that:

1. All hearing requests are hereby DENIED;

- 2. The application of Holcim (US) Inc. for Air Quality Permit Nos. 8996 and PSDTX454M5, is APPROVED and the permit is ISSUED in the form as shown in the draft permit prepared by the Executive Director;
- 3. The Executive Director's Response to Public Comment is ADOPTED in accordance with 30 TAC Chapter 55; and
- 4. If any provision, sentence, clause or phrase of this Order is for any reason held to be invalid, the invalidity of any portion shall not affect the validity of the remaining portions of the Order.

TEXAS COMMISSION ON ENVIRONMENTAL QUALITY

n/Niermann, Chairman

4-6-2021

Date Signed

Re: Permit Amendment

Permit Numbers: 8996 and PSDTX454M5

Holcim Us Inc

Portland Cement Plant Midlothian, Ellis County

Regulated Entity Number: RN100219286 Customer Reference Number: CN601505985

Dear Dr. Moser:

This is in response to your Form PI-1 General Application concerning the proposed amendment to Permit Number 8996 and modification to Permit Numbers and PSDTX454M5.

In accordance with Title 30 Texas Administrative Code § 116.116(b) [30 TAC § 116.116(b)], and based on our review, Permit Number 8996 is hereby amended and Permit Numbers and PSDTX454M5 is modified. This information will be incorporated into the existing permit file. Enclosed are revised general conditions, special conditions pages, and a maximum allowable emission rates table (MAERT). We appreciate your careful review of the permit and assuring that all requirements are consistently met. In addition, the construction and operation of the facilities must be as represented in the application.

This amendment will be automatically void upon the occurrence of any of the following, as indicated in 30 TAC § 116.120(a):

- 1. Failure to begin construction of the changes authorized by this amendment within 18 months from the date of this authorization.
- 2. Discontinuance of construction of the changes authorized by this amendment for a period of 18 consecutive months or more.
- 3. Failure to complete the changes authorized by this amendment within a reasonable time.

Upon request, the executive director may grant extensions as allowed in 30 TAC § 116.120(b).

Dr. Michel Moser Page 2

Re: Permit Numbers: 8996 and PSDTX454M5

If you need further information or have any questions, please contact Mr. Joel Stanford at (512) 239-0270 or write to the Texas Commission on Environmental Quality, Office of Air, Air Permits Division, MC-163, P.O. Box 13087, Austin, Texas 78711-3087.

Sincerely,

Jon Niermann, Chairman

For the Texas Commission on Environmental Quality

Enclosure

cc: Air Section Manager, Region 4 - Dallas/Fort Worth

Air Permits Section Chief, New Source Review Section (6PD-R), U.S. Environmental Protection Agency, Region 6, Dallas

Project Number: 8996

Texas Commission on Environmental Quality Air Quality Permit

A Permit Is Hereby Issued To
Holcim (Us) Inc.

Authorizing the Construction and Operation of
Portland Cement Plant
Located at Midlothian, Ellis County, Texas
Latitude 32° 30′ 40″ Longitude ~96° 58′ 25″

Permits: 8996 and	PSD1X454M5	
Amendment Date:	April 6, 2021	<u></u>
Expiration Date:	August 18, 2026	- An ho
•		For the Commission

- 1. **Facilities** covered by this permit shall be constructed and operated as specified in the application for the permit. All representations regarding construction plans and operation procedures contained in the permit application shall be conditions upon which the permit is issued. Variations from these representations shall be unlawful unless the permit holder first makes application to the Texas Commission on Environmental Quality (commission) Executive Director to amend this permit in that regard and such amendment is approved. [Title 30 Texas Administrative Code (TAC) Section 116.116 (30 TAC § 116.116)] ¹
- 2. **Voiding of Permit**. A permit or permit amendment is automatically void if the holder fails to begin construction within 18 months of the date of issuance, discontinues construction for more than 18 months prior to completion, or fails to complete construction within a reasonable time. Upon request, the executive director may grant an 18-month extension. Before the extension is granted the permit may be subject to revision based on best available control technology, lowest achievable emission rate, and netting or offsets as applicable. One additional extension of up to 18 months may be granted if the permit holder demonstrates that emissions from the facility will comply with all rules and regulations of the commission, the intent of the Texas Clean Air Act (TCAA), including protection of the public's health and physical property; and (b)(1)the permit holder is a party to litigation not of the permit holder's initiation regarding the issuance of the permit; or (b)(2) the permit holder has spent, or committed to spend, at least 10 percent of the estimated total cost of the project up to a maximum of \$5 million. A permit holder granted an extension under subsection (b)(1) of this section may receive one subsequent extension if the permit holder meets the conditions of subsection (b)(2) of this section. [30 TAC § 116.120]
- 3. **Construction Progress**. Start of construction, construction interruptions exceeding 45 days, and completion of construction shall be reported to the appropriate regional office of the commission not later than 15 working days after occurrence of the event. [30 TAC § 116.115(b)(2)(A)]
- 4. **Start-up Notification**. The appropriate air program regional office shall be notified prior to the commencement of operations of the facilities authorized by the permit in such a manner that a representative of the commission may be present. The permit holder shall provide a separate notification for the commencement of operations for each unit of phased construction, which may involve a series of units commencing operations at different times. Prior to operation of the facilities authorized by the permit, the permit holder shall identify the source or sources of allowances to be utilized for compliance with Chapter 101, Subchapter H, Division 3 of this title (relating to Mass Emissions Cap and Trade Program). [30 TAC § 116.115(b)(2)(B)]
- 5. **Sampling Requirements**. If sampling is required, the permit holder shall contact the commission's Office of Compliance and Enforcement prior to sampling to obtain the proper data forms and procedures. All sampling and testing procedures must be approved by the executive director and coordinated with the regional representatives of the commission. The permit holder is also responsible for providing sampling facilities and conducting the sampling operations or contracting with an independent sampling consultant. [30 TAC § 116.115(b)(2)(C)]
- 6. **Equivalency of Methods.** The permit holder must demonstrate or otherwise justify the equivalency of emission control methods, sampling or other emission testing methods, and monitoring methods proposed as alternatives to methods indicated in the conditions of the permit. Alternative methods shall be applied for in writing and must be reviewed and approved by the executive director prior to their use in fulfilling any requirements of the permit. [30 TAC § 116.115(b)(2)(D)]
- 7. **Recordkeeping.** The permit holder shall maintain a copy of the permit along with records containing the information and data sufficient to demonstrate compliance with the permit, including production records and

Revised (10/12)

1

operating hours; keep all required records in a file at the plant site. If, however, the facility normally operates unattended, records shall be maintained at the nearest staffed location within Texas specified in the application; make the records available at the request of personnel from the commission or any air pollution control program having jurisdiction in a timely manner; comply with any additional recordkeeping requirements specified in special conditions in the permit; and retain information in the file for at least two years following the date that the information or data is obtained. [30 TAC § 116.115(b)(2)(E)]

- 8. **Maximum Allowable Emission Rates**. The total emissions of air contaminants from any of the sources of emissions must not exceed the values stated on the table attached to the permit entitled "Emission Sources---Maximum Allowable Emission Rates." [30 TAC § 116.115(b)(2)(F)] 1
- 9. **Maintenance of Emission Control**. The permitted facilities shall not be operated unless all air pollution emission capture and abatement equipment is maintained in good working order and operating properly during normal facility operations. The permit holder shall provide notification in accordance with 30 TAC §101.201, 101.211, and 101.221 of this title (relating to Emissions Event Reporting and Recordkeeping Requirements; Scheduled Maintenance, Startup, and Shutdown Reporting and Recordkeeping Requirements; and Operational Requirements). [30 TAC§ 116.115(b)(2)(G)]
- 10. **Compliance with Rules**. Acceptance of a permit by an applicant constitutes an acknowledgment and agreement that the permit holder will comply with all rules and orders of the commission issued in conformity with the TCAA and the conditions precedent to the granting of the permit. If more than one state or federal rule or regulation or permit condition is applicable, the most stringent limit or condition shall govern and be the standard by which compliance shall be demonstrated. Acceptance includes consent to the entrance of commission employees and agents into the permitted premises at reasonable times to investigate conditions relating to the emission or concentration of air contaminants, including compliance with the permit. [30 TAC § 116.115(b)(2)(H)]
- 11. **This** permit may not be transferred, assigned, or conveyed by the holder except as provided by rule. [30 TAC § 116.110(e)]
- 12. **There** may be additional special conditions attached to a permit upon issuance or modification of the permit. Such conditions in a permit may be more restrictive than the requirements of Title 30 of the Texas Administrative Code. [30 TAC § 116.115(c)]
- 13. **Emissions** from this facility must not cause or contribute to "air pollution" as defined in Texas Health and Safety Code (THSC) §382.003(3) or violate THSC § 382.085. If the executive director determines that such a condition or violation occurs, the holder shall implement additional abatement measures as necessary to control or prevent the condition or violation.
- 14. **The** permit holder shall comply with all the requirements of this permit. Emissions that exceed the limits of this permit are not authorized and are violations of this permit. ¹

¹ Please be advised that the requirements of this provision of the general conditions may not be applicable to greenhouse gas emissions.

Revised (10/12) 2

Common Acronyms in Air Permits

°C = Temperature in degrees Celsius °F = Temperature in degrees Fahrenheit °K = Temperature in degrees Kelvin µg = microgram µg/m³ = microgram per cubic meter acfm = actual cubic feet per minute AMOC = alternate means of control AOS = alternative operating scenario

AP-42 = Air Pollutant Emission Factors, 5th edition

APD = Air Permits Division

API = American Petroleum Institute APWL = air pollutant watch list BPA = Beaumont/ Port Arthur

BACT = best available control technology

BAE = baseline actual emissions

bbl = barrel

bbl/day = barrel per day bhp = brake horsepower

BMP = best management practices

Btu = British thermal unit

Btu/scf = British thermal unit per standard cubic foot or feet

CAA = Clean Air Act

CAM = compliance-assurance monitoring

CEMS = continuous emissions monitoring systems

cfm = cubic feet (per) minute CFR = Code of Federal Regulations

CN = customer ID number CNG = compressed natural gas

CO = carbon monoxide

COMS = continuous opacity monitoring system CPMS = continuous parametric monitoring system

DFW = Dallas/ Fort Worth (Metroplex)

DE = destruction efficiency

DRE = destruction and removal efficiency dscf = dry standard cubic foot or feet

dscfm = dry standard cubic foot or feet per minute

ED = (TCEQ) Executive Director

EF = emissions factor

EFR = external floating roof tank EGU = electric generating unit EI = Emissions Inventory

ELP = El Paso

EPA = (United States) Environmental Protection Agency

EPN = emission point number
ESL = effects screening level
ESP = electrostatic precipitator
FCAA = Federal Clean Air Act
FCCU = fluid catalytic cracking unit
FID = flame ionization detector
FIN = facility identification number

ft = foot or feet

ft/sec = foot or feet per second

q = qram

gal/wk = gallon per week gal/yr = gallon per year

GLC = ground level concentration

GLCmax = maximum (predicted) ground-level

concentration

gpm = gallon per minute

gr/1000scf = grain per 1000 standard cubic feet gr/dscf = grain per dry standard cubic feet

H2CO = formaldehyde H2S = hydrogen sulfide H2SO4 = sulfuric acid

HAP = hazardous air pollutant as listed in § 112(b) of the

Federal Clean Air Act or Title 40 Code of Federal

Regulations Part 63, Subpart C

HC = hydrocarbons

HCI = hydrochloric acid, hydrogen chloride

Hg = mercury

HGB = Houston/Galveston/Brazoria

hp = horsepower

hr = hour

IFR = internal floating roof tank

in H2O = inches of water

in Hg = inches of mercury

IR = infrared

ISC3 = Industrial Source Complex, a dispersion model ISCST3 = Industrial Source Complex Short-Term, a

dispersion model

K = Kelvin; extension of the degree Celsius scaled-down

to absolute zero

LACT = lease automatic custody transfer LAER = lowest achievable emission rate

lb = pound hp = horsepower

hr = hour lb/day = pound per day

lb/hr = pound per hour

lb/MMBtu = pound per million British thermal units LDAR = Leak Detection and Repair (Requirements)

LNG = liquefied natural gas LPG = liquefied petroleum gas LT/D = long ton per day

m = meter

 m^3 = cubic meter

m/sec = meters per second

MACT = maximum achievable control technology MAERT = Maximum Allowable Emission Rate Table MERA = Modeling and Effects Review Applicability

mg = milligram

mg/g = milligram per gram

mL = milliliter

MMBtu = million British thermal units

MMBtu/hr = million British thermal units per hour

MSDS = material safety data sheet

MSS = maintenance, startup, and shutdown

MW = megawatt

NAAQS = National Ambient Air Quality Standards NESHAP = National Emission Standards for Hazardous

Air Pollutants

NGL = natural gas liquids

NNSR = nonattainment new source review

 NO_x = total oxides of nitrogen

NSPS = New Source Performance Standards

PAL = plant-wide applicability limit

PBR = Permit(s) by Rule

PCP = pollution control project

PEMS = predictive emission monitoring system

PID = photo ionization detector

PM = periodic monitoring

PM = total particulate matter, suspended in the

atmosphere, including PM₁₀ and PM_{2.5}, as represented

 $PM_{2.5}$ = particulate matter equal to or less than 2.5

microns in diameter

 PM_{10} = total particulate matter equal to or less than 10 microns in diameter, including $PM_{2.5}$, as represented

POC = products of combustion

ppb = parts per billion

ppm = parts per million

ppmv = parts per million (by) volume

psia = pounds (per) square inch, absolute

psig = pounds (per) square inch, gage

PTE = potential to emit

RA = relative accuracy

RATA = relative accuracy test audit

RM = reference method

RVP = Reid vapor pressure

scf = standard cubic foot or feet

scfm = standard cubic foot or feet (per) minute

SCR = selective catalytic reduction

SIL = significant impact levels

SNCR = selective non-catalytic reduction

 $SO_2 = sulfur dioxide$

SOCMI = synthetic organic chemical manufacturing industry

SRU = sulfur recovery unit

TAC = Texas Administrative Code

TCAA = Texas Clean Air Act

TCEQ = Texas Commission on Environmental Quality

TD = Toxicology Division

TLV = threshold limit value

TMDL = total maximum daily load

tpd = tons per day

tpy = tons per year

TVP = true vapor pressure

VOC = volatile organic compounds as defined in Title 30

Texas Administrative Code § 101.1

VRU = vapor recovery unit or system

Special Conditions

Permit Numbers 8996 and PSDTX454M5

Emission Limitations, Fuel Specifications, and Operating Requirements

- 1. This permit covers only those sources of emissions listed in the attached table entitled "Emission Sources Maximum Allowable Emission Rates," and those sources are limited to the emission limits and other conditions specified in that attached table. This permit authorizes planned maintenance, startup, and shutdown (MSS) activities which comply with the emission limits in the maximum allowable emission rates table (MAERT) and the opacity limits of Special Condition No. 9.
- 2. These facilities shall comply with all applicable requirements of the following regulations.
 - A. The U. S. Environmental Protection Agency (EPA) Standards of Performance for New Stationary Sources (NSPS) in Title 40 Code of Federal Regulations (40 CFR) Part 60:
 - (1) Subpart A General Provisions;
 - (2) Subpart F Portland Cement Plants;
 - (3) Subpart Y Coal Preparation Plants; and
 - (4) Subpart OOO Nonmetallic Mineral Processing Plants.
 - B. The EPA National Emission Standards for Hazardous Air Pollutants (NESHAPS) for Source Categories in 40 CFR Part 63:
 - (1) Subpart A General Provisions; and
 - (2) Subpart LLL Portland Cement Manufacturing Industry.
 - C. The Texas Commission on Environmental Quality (TCEQ) regulations in Title 30 Texas Administrative Code (30 TAC) Chapter 117, Subchapter E, Division 2 Cement Kilns.
 - D. If any condition of this permit is more stringent than the regulations so incorporated, then for the purposes of complying with this permit, the permit condition shall govern and be the standard by which compliance shall be demonstrated.
- 3. Clinker production is limited to:
 - A. 1.34 million short tons per year (stpy) per kiln; and
 - B. 2.67 million stpy plant-wide.
 - C. Production limits are based on a rolling 12-month period.
- 4. The facility is subject to 40 CFR 63, Subpart LLL at all times. The following limits are associated with a compliance date of September 9, 2015, subject to change to September 9, 2016 per approval of a pending one-year extension request.

Contaminant	Limit	Other conditions
Particulate Matter (PM) filterable (PM/PM ₁₀ /PM _{2.5})	0.07 pounds per ton (lb/T) clinker or alternative PM limit calculated using Equation 1 of 40 CFR 63.1343(b)(2)	30 operating day rolling average excluding periods of startup / shutdown (SU/SD) as defined in 40 CFR 63.1341

Contaminant	Limit	Other conditions
Total Hydrocarbons (THC) OR alternative limit on Organic Hazardous Air Pollutants (OHAP)	24 parts per million THC (as propane) by volume dry (ppmvd) corrected to 7 percent oxygen (% O ₂) OR Alternative OHAP limit as determined per 40 CFR 63.1349(b)(7)	30 operating day rolling average excluding periods of SU/SD as defined in 40 CFR 63.1341
Mercury(Hg)	55 lb/million tons clinker	30 operating day rolling average excluding periods of SU/SD as defined in 40 CFR 63.1341
Dioxins/Furans (D/F)	0.20 nanogram per dry standard cubic meter (TEQ), corrected to 7% O ₂ OR 0.40 TEQ, corrected to 7% O ₂ , if average temperature at the inlet to the first PM control device during the D/F performance test is 400 °F or less.	
Hydrogen Chloride (HCI)	3 ppmvd corrected to 7% O ₂ as determined per 40 CFR 63.1349(b)(6)	30 operating day rolling average excluding periods of SU/SD as defined in 40 CFR 63.1341

- 5. When ammonia (NH3) is being injected to control emissions of NOx, each kiln shall not exceed the NH₃ emission limit of 35 ppmvd corrected to 7% O₂, on a 24 hour rolling average basis.
- 6. Authorized kiln and precalciner fuels are as follows.
 - A. Pipeline-quality, sweet natural gas;
 - B. Coal containing no more than 3.0 percent sulfur by weight;
 - C. Petroleum coke.
 - D. Non-waste fuels as described in 40 CFR §§ 241.3 and 241.4. Any non-hazardous secondary material used as a fuel other than those identified in 40 CFR § 241.4 must meet the legitimacy criteria set forth in 40 CFR § 241.3(d)(1). The permit holder shall maintain records showing that the non-hazardous secondary materials are managed as a valuable commodity; have a meaningful heating value; are used as a fuel in the kiln or precalciner to recover energy; contain contaminants or groups of contaminants at levels equal to or less than natural gas, coal or petroleum coke fuels as specified in Special Condition Nos. 6.A, 6.B, or 6.C, or other traditional fuels that the kilns and precalciners are designed to burn; and, in the case of non-hazardous secondary materials that have been previously discarded, have been processed into legitimate non-waste fuel. Non-waste fuels, include, but are not limited to the following:
 - (1) Non-hazardous solids:

- (a) oil containing materials, including, but not limited to: on-site and off-site generated oil filter fluff, absorbents, rags, grease, wax, and other similar materials;
- (b) material collected at municipal and post-industrial recycling facilities such as paper, cardboard, and plastics which may contain small quantities of metals; and
- (c) materials collected during or generated from carpet recycling (such as carpet fiber, carpet backing, carpet pads, and other similar materials);
- (d) rubber-derived fuel (RDF), including, but not limited to: tire-derived fuel (TDF), manufacturing raw material, rejects, and waste; green rubber, off-specification rubber, hoses, and other similar rubber materials;
- (e) asphalt base composite roofing material, up to 10 tons per hour and 87,000 tons per year (tpy), including: sand, fiberglass, and other non-asphalt materials in the composite;
- (f) wood chips; and
- (g) activated carbon.
- (2) Non-hazardous liquids:
 - oil containing liquids, including, but not limited to: on-site and off-site generated on-specification oil, off-specification oil, oil-water emulsions, oily waters, virgin fuel oils, virgin oils, and other similar liquids;
 - (b) glycols; and
 - (c) glycerin containing liquids generated from the production of biodiesel fuel.
- E. Hazardous waste, as defined by the Federal Resource Conservation and Recovery Act and the rules implementing that Act, may not be fired.
- 7. Fuels are limited and shall be recorded as follows:
 - A. The non-waste fuel fed to each kiln system (kiln and precalciner) is limited as a percentage of the total fuel fed into the kiln system, calculated as heat input on a higher heating value (HHV) basis, on an daily basis, as follows:
 - (1) Total non-waste fuels, as described in Special Condition No. 6.D above, 60 percent of the total fuel; and
 - (2) TDF, 45 percent of the total fuel.
 - B. The natural gas heating value shall be provided by the gas supplier.
 - C. The HHV and sulfur content of the coal shall be determined by sampling each coal delivery upon railcar unloading. (10/17)

Ozone Season Emission Limits

8. For each kiln system, from March 1 through October 31 of each year Holcim will meet the Chapter 117 requirements specified in Special Condition No. 2.C during all periods of normal kiln operation. Normal kiln operation does not include the following circumstances:

- A. MSS activity when the precalciner operating temperature is too low for proper SNCR operation; and
- B. an imminent or actual breakdown or excursion of the process, or other process that results in unauthorized emissions; or when a detached or secondary plume is observed by using EPA Test Method (TM) 22 of Appendix A-7 in 40 CFR Part 60. The permit holder must notify the TCEQ Regional Office within 24 hours of a positive EPA TM 22 observation of a detached or secondary plume. This notification does not satisfy excess opacity event reporting requirements under 30 TAC § 101.201.

Opacity / Visible Emission Limitations

9. During normal operations, the opacity of emissions shall not exceed the limits in the table below.

Source	EPNs	Opacity Limit for any six- minute period
Kiln stacks	7*, 62*	10%
All other baghouse stacks	see MAERT	5%

- 10. During MSS activities, the opacity of emissions for sources without PM CPMS shall not exceed 20% for any six-minute period, for any source except for buildings, enclosed facilities, or other structures, for which the opacity shall not exceed 30% for any six-minute period.
- 11. Compliance with the opacity limits is determined:
 - (1) For EPNs 7* and 62* by using a PM CPMS that has passed the initial certification requirements of 40 CFR Part 63, Subpart LLL may be used instead of a COMS. If the CPMS indicates an exceedance of the site-specific operating limit established per 40 CFR 63 Subpart LLL PM emission compliance, a visible emission observation shall be performed within 24 hours to establish compliance with the applicable opacity limits of this Special Condition.

The visible emission determination must be made in accordance with 40 CFR Part 60, Appendix A, Test Method 22. The observation period when conducting Method 22 shall extend for at least one minute during normal operations. Contributions from uncombined water shall not be included in determining compliance with this condition. If visible emissions are observed, then the permit holder must conduct a six-minute test of opacity in accordance with 40 CFR Part 60 Appendix A, Test Method 9. The Method 9 test must begin within one hour of any observation of visible emissions.

- (2) For all other EPNs,
 - (a) By following the periodic monitoring procedures specified for each EPN in the federal operating permit (FOP) for this site, FOP No. O1046.
 - (b) After September 9, 2015, any source subject to the opacity monitoring requirements of 40 CFR § 63.1350(f) may follow those procedures to demonstrate compliance with the opacity limits of this permit instead of Special Condition 11.2(a).

(c) Periods of excess opacity are subject to the requirements of 30 TAC §§ 101.201 and 101.211, relating to Emission Events and Scheduled Maintenance, Start-up, and Shutdown Activities.

Fugitive Emissions

- 12. All hoods, ducts, and collection systems shall be effective in preventing fugitive emissions from buildings. Compliance with this condition shall be determined per the monitoring procedures specified in the Operation and Maintenance Plan required by 40 CFR Part 63, Subpart LLL.
- 13. Dust emissions from cement loading into trucks or railcars shall be controlled with a self-sealing shroud at the loading point and venting of the displaced air to a fabric filter.
- 14. Material collected in the baghouses shall be disposed of in a manner that will prevent the material from becoming airborne. The bypass baghouse dust loadout shall be enclosed on two sides with a vertical windbreak extending up to the first-floor level. A water sprinkler system or water truck shall be used as necessary to control dust emissions from any baghouse dust disposed of in on-site landfills.
- 15. In order to control fugitive dust emissions to the minimum level possible under existing conditions:
 - A. plant roads shall be paved, water sprinkled, or swept, as necessary;
 - B. quarry roads, including haul roads (i.e., Raw Material Road and Bypass Dust Road), shall be oiled or water sprinkled, as necessary; and
 - C. primary coal stockpiles shall be stored in the coal storage building. Any outside coal stockpiles shall be sprayed with water and/or chemicals, as necessary.
- 16. Individual Chemical Species
 - A. For each kiln stack, if not specified in the MAERT, the emission rate for any compound with an Effects Screening Level (ESL) is limited as follows:
 - (1) Emission Rate (pound per hour) = short-term ESL x 3.84
 - (2) Emission Rate (TPY) = annual ESL x 324
 - B. The short-term and annual ESLs for any individual chemical species limited by this condition are those contained in the TCEQ ESL list dated March 17, 2014.
 - C. The allowable emission rate shall be calculated for each contaminant tested pursuant to Special Condition No. 19 and the calculated allowable emission rate shall be included in the sampling report submitted pursuant to Special Condition No. 19.F.
- 17. For each kiln stack, compliance with the 12-month rolling emission limits in the MAERT for PM, PM equal to or less than 10 microns in diameter (PM₁₀), and PM equal to or less than 2.5 microns in diameter (PM_{2.5}) shall be calculated using the actual operation hours and stack test data for each of the following operating scenarios:
 - A. raw mill on, scrubber on;
 - B. raw mill off, scrubber on;

Special Conditions
Permit Numbers 8996 and PSDTX454M5
Page 6

- C. raw mill on, scrubber off; and
- D. raw mill off, scrubber off.

Initial Demonstration of Compliance

- 18. Sampling ports and platforms shall be incorporated into the design of the Kiln Stacks according to the specifications set forth in "Chapter 2, Stack Sampling Facilities." Alternate sampling facility designs may be submitted for approval by the TCEQ Regional Director.
- 19. The holder of this permit shall perform stack sampling and other testing by September 30, 2010, as required, to establish the actual pattern and quantities of PM₁₀ (front-half and back-half), lead, and VOC being emitted into the atmosphere from the Kiln Line 2 Stack (EPN 62*) and shall perform stack sampling of PM emissions from three baghouses: Finish Mill System No. 1 Baghouse, (EPN 23*); Finish Mill System No. 2 Baghouse, (EPN 29*); SKS and Cement Mill Baghouse, (EPN 66*). Stack sampling and other testing for Kiln Line 1 Stack (EPN 7*) to establish the actual pattern and quantities of lead shall be completed by the later of the first continuous emissions monitoring system (CEMS) quality-assurance testing conducted in accordance with 40 CFR Part 60, Appendix F, Procedure 1, § 5.1.1 or compliance sampling required by 40 CFR Part 63, Subpart LLL after restart. Sampling results performed since September 22, 2005, can satisfy this condition if determined acceptable to the TCEQ and the TCEQ Regional Office waives subsequent testing. Sampling must be conducted in accordance with appropriate procedures of the TCEQ Sampling Procedures Manual and in accordance with EPA Test Methods (TMs). The holder of this permit is responsible for providing sampling and testing facilities and conducting the sampling and testing operations at its expense. Production rates shall be recorded during each test run and entered in the final sampling report. The sampling of Kiln Line 1 Stack (EPN 7*), Kiln Line 2 Stack (EPN 62*), Finish Mill System No. 1 Baghouse (EPN 23*), Finish Mill System No. 2 Baghouse (EPN 29*), SKS and Cement Mill Baghouse (EPN 66*), has been performed in accordance with this Special Condition. (10/18)
 - A. Air contaminants emitted from Kiln 2 (EPN 62*, once the Regenerative Thermal Oxidizer [RTO] is installed) and Kiln 1 (EPN 7*, once the Selective Catalytic Reduction for THC / OHAP [SCR-THC] is installed) to be tested for include PM₁₀, PM_{2.5}, and methane. Initial determination of compliance for PM (filterable), HCI, D/F, THC or OHAP, and Hg shall be performed in accordance with the applicable initial compliance requirements of 40 CFR Part 63, Subpart LLL. Initial determination of compliance for volatile organic compounds (VOC) shall be performed in accordance with Special Condition No. 22.C.
 - (1) Determine the PM lb/hr emission rates of the MAERT as the average of three stack sampling test runs; each run must be at least one hour and no more than three hours in duration. For PM/PM₁₀/PM_{2.5}, sampling shall be conducted both while the inline raw mill is operating and is not operating. Both filterable and condensable PM must be tested to demonstrate compliance with the filterable and condensable PM lbs/hr emission limits in the MAERT. The filterable PM does not need to be partitioned into 2.5 and 10 micron fractions if compliance with the PM_{2.5} and PM₁₀ emission limits in the MAERT is demonstrated by assuming all the filterable PM is PM_{2.5}. Condensable PM is assumed to be all less than one micron in diameter.
 - (2) The kiln system, wet scrubbers, and other emission controls must be functioning properly during the testing.

- (3) The specific method and procedure for the VOC testing in Special Condition No. 23 must be identified in the test plan notice submitted to the Dallas/Fort Worth Regional Office
- B. The TCEQ Dallas/Fort Worth Regional Office shall be contacted as soon as testing is scheduled, but not less than 30 days prior to sampling to schedule a pretest meeting. The notice shall include:
 - (1) Date for pretest meeting.
 - (2) Date sampling will occur.
 - (3) Name of firm conducting sampling.
 - (4) Type of sampling equipment to be used.
 - (5) Method or procedure to be used in sampling.
 - (6) A test plan for TCEQ approval which identifies the alternative fuel combinations and maximum firing rates to be tested, and the speciated compounds emissions to be sampled and reported.
 - (7) The purpose of the pretest meeting is to review the necessary sampling and testing procedures, to provide the proper forms for recording pertinent data, and to review the format and procedures for submitting the test reports. In addition, TCEQ may identify species of PM₁₀ and VOC to be analyzed from the PM₁₀ and VOC samples. The pretest meeting shall be conducted on-site at the facility in the presence of a qualified person knowledgeable about stack testing and the units being tested.
 - (8) A written proposed description of any deviation from sampling procedures specified in permit conditions or TCEQ or EPA sampling procedures shall be made available to the TCEQ prior to the pretest meeting. The TCEQ Dallas/Fort Worth Regional Director shall approve or disapprove of any deviation from specified sampling procedures.
- C. The deadlines for the sampling specified above may be extended. Requests for additional time to perform sampling shall be submitted to the TCEQ Dallas/Fort Worth Regional Office. Additional time to comply with any applicable requirements of 40 CFR Part 60 requires EPA approval.
- D. Test waivers and alternate/equivalent procedure proposals for NSPS and NESHAPS for Source Categories testing which must have EPA approval shall be submitted to the TCEQ Dallas/Fort Worth Regional Director.
- E. Primary operating parameters that enable determination of production rates shall be monitored and recorded during the stack test. These parameters are to be determined at the pretest meeting. Additional stack testing may be required if the kiln achieves a production rate more than 10 percent higher than the rate occurring during the most recent stack test performed after the issuance of this permit.
- F. Two copies of each initial demonstration of compliance sampling report shall be forwarded to the TCEQ within 60 days after sampling is completed unless an extension is granted by the TCEQ Regional Office. Sampling reports shall comply with the provisions of Chapter 14 of the TCEQ Sampling Procedures Manual. The reports shall be distributed as follows:
 - (1) One copy to the TCEQ Dallas/Fort Worth Regional Office.
 - (2) One copy to the TCEQ Austin Office of Air, Air Permits Division.

Continuous Demonstration of Compliance

- 20. The holder of this permit shall install, calibrate, operate, and maintain CEMS to measure and record the SO₂, NO_x, and CO concentrations, and continuous flow rate sensors to measure and record the exhaust flow rate, in each kiln. The SO₂, NO_x, and CO CEMS and the continuous flow rate sensor shall be used as a continuous emission rate monitoring system (CERMS) for SO₂, NO_x, and CO.
 - A. The systems shall meet the design and performance specifications, pass the field tests, and meet the installation requirements and the data analysis and reporting requirements specified in the applicable portions of 40 CFR Part 60, Appendix B,
 - (1) Performance Specification Nos. 2 through 4, for the CEMS; and
 - (2) Performance Specification No. 6 for the flow rate sensors.
 - B. Each CEMS shall be zeroed and spanned daily and corrective action taken when the 24-hour span drift exceeds two times the amounts specified in 40 CFR Part 60, Appendix B, or as specified by the TCEQ if not specified in Appendix B. Zero and span is not required on weekends and plant holidays if instrument technicians are not normally scheduled on those days, unless the monitor is required by a subpart of NSPS or NESHAPS, in which case zero and span shall be done daily without exception.
 - C. Each CEMS shall be quality-assured at least quarterly in accordance with 40 CFR Part 60, Appendix F, Procedure 1, § 5.1.2. All cylinder gas audit results and any CEMS downtime shall be reported quarterly to the appropriate TCEQ Regional Director, and necessary corrective action shall be taken if the downtime exceeds 10 percent of the kiln operating hours in the quarter. Failure to complete any corrective action as directed by the TCEQ Dallas/Fort Worth Regional Office may be deemed a violation of the permit. For non-NSPS sources, an equivalent method approved by the TCEQ may be used.
 - D. Each CEMS shall complete a minimum of one cycle of sampling, analyzing, and data recording for each successive 15-minute period. One-hour average concentrations and pounds of pollutant per hour shall be computed from normally at least four, and a minimum of two, data points equally-spaced over each one-hour period. Data recorded during periods of CEMS breakdowns, repairs, calibration checks, and zero and span adjustments shall not be included in the computed data averages.
- 21. Upon request by the TCEQ Executive Director or the TCEQ Regional Director having jurisdiction, the holder of this permit shall perform stack sampling and/or other testing as required to establish the actual pattern and quantities of air contaminants being emitted into the atmosphere from the cement kilns to demonstrate compliance with the MAERT and with emission performance levels as specified in the special conditions and/or otherwise prove satisfactory equipment performance. Sampling must be conducted in accordance with the TCEQ Sampling Procedures Manual or in accordance with the applicable EPA 40 CFR procedures. Any deviations from those procedures must be approved by the TCEQ Executive Director or the appropriate TCEQ Regional Director prior to conducting sampling.
 - Air contaminants emitted from the kilns to be tested for include (but are not limited to) PM, NO_x, CO, VOC, and SO₂.
- 22. The holder of this permit shall install, calibrate, operate, and maintain CEMS to measure and record the in-stack concentrations of THC, Hg, and oxygen from Kiln 2 (EPN 62*) and Kiln 1 (EPN 7*) in accordance with the requirements of 40 CFR Part 63, Subpart LLL. The holder of this permit shall

install, calibrate, operate, and maintain a continuous flow rate sensor to measure and record the exhaust flow rate in each kiln stack. The THC CEMS, which may be the same unit as described in Special Condition 20, is subject to the following:

- A. The THC CEMS and the continuous flow rate sensor shall be used as a CERMS for VOC.
- B. The CEMS monitoring data shall be reduced to hourly average concentrations in accordance with 40 CFR §60.13(h)(2(i)-(ix).
 - Each CEMS shall complete a minimum of one cycle of sampling, analyzing, and data recording for each successive 15-minute period.
 - Data recorded during periods of CEMS breakdowns, repairs, calibration checks, and zero and span adjustments shall not be included in the computed data averages.
- C. Compliance with VOC emission limits in the MAERT shall be determined by applying the site specific VOC to methane fraction to THC CEMS data to calculate VOC lb/hr emissions from the kiln on a 30-day rolling average.
- 23. When ammonia is being injected to control NOx emissions per the applicable requirements of 30 TAC Chapter 117, the NH₃ concentration in the Exhaust Stack shall be tested or calculated according to one of the methods listed below and shall be tested or calculated according to frequency listed below. Testing for NH₃ slip is only required on days when the SNCR unit is in operation.
 - A. The holder of this permit may install, calibrate, maintain, and operate a CEMS to measure and record the concentrations of NH₃. The NH₃ concentrations shall be corrected and reported in accordance with Special Condition No. 5 above.
 - B. The NH₃ slip may be measured using a sorbent or stain tube device specific for NH₃ measurement in the appropriate range. The frequency of sorbent or stain tube testing shall be monthly.
 - (1) If the sorbent or stain tube testing indicates an ammonia (NH₃) slip concentration that exceeds 35 parts per million (ppm) at any time, the permit holder shall begin NH₃ testing by either the Phenol-Nitroprusside Method, the Indophenol Method, or EPA Conditional Test Method (CTM) 27 on a quarterly basis in addition to the monthly sorbent or stain tube testing.
 - (2) If the quarterly testing indicates NH₃ slip is 35 ppm or less, the Phenol Nitroprusside Indophenol CTM 27 tests may be suspended until sorbent or stain tube testing again indicate 35 ppm NH₃ slip or greater.
 - C. The permit holder may install and operate a second NO_x CEMS probe located between the kiln and the SNCR, upstream of the stack NO_x CEMS, which may be used in association with the SNCR efficiency and NH₃ injection rate to estimate NH₃ slip. This condition shall not be construed to set a minimum NO_x reduction efficiency on the SNCR unit.
 - D. The permit holder may install and operate a dual stream system of NO_x CEMS at the exit of the SNCR. One of the exhaust streams would be routed, in an unconverted state, to one NO_x CEMS, and the other exhaust stream would be routed through a NH₃ converter to convert NH₃ to NO_x and then to a second NO_x CEMS. The NH₃ slip concentration shall be calculated from the delta between the two NO_x CEMS readings (converted and unconverted).

- E. Any other method used for measuring NH₃ slip shall require prior written approval from the TCEQ Air Permits Division in Austin.
- 24. The holder of this permit shall install, calibrate and maintain systems and operate such systems as necessary to control contaminants regulated by 40 CFR 63, Subpart LLL to the emission limits set in Special Condition 4. Line 2 (EPN 62*) will have an RTO system and Line 1 (EPN 7*) will have an SCR-THC system.

25. Regional Notification

- A. The TCEQ Regional Director shall be notified as soon as possible after the discovery of any CEMS or CPMS malfunction which is expected to result in more than 24 hours of lost data. Supplemental stack concentration measurements may be required at the discretion of the appropriate TCEQ Regional Director in case of extended CEMS or CPMS downtime.
- B. The TCEQ Dallas/Fort Worth Regional Office shall be notified at least 30 days prior to the quarterly cylinder gas audit required by 40 CFR Part 60 Appendix F in order to provide the TCEQ staff the opportunity to observe the testing.

Planned Maintenance, Startup, and Shutdown

- 26. The holder of this permit shall minimize emissions during planned MSS activities by operating the facility and associated air pollution control equipment in accordance with good air pollution control practices, safe operating practices, and protection of the facility.
- 27. Planned startup and shutdown activities associated with the kilns shall comply with the following definitions and requirements to minimize emissions:
 - A. A planned startup of the kiln is defined as the period starting when the kiln's induced draft fan is turned on and fuel is fired in the main burner and ending when feed is being continuously introduced into the kiln for at least 120 minutes or when the feed rate exceeds 150 tons per hour, whichever occurs first.
 - B. Shutdown means the cessation of kiln operation. Shutdown begins when feed to the kiln is halted and ends when continuous kiln rotation ceases.
- 28. Compliance with the emissions limits for planned maintenance activities identified in this permit shall be demonstrated as follows.
 - A. For ILE planned maintenance activities (Attachment A):
 - (1) The total emissions from all ILE planned maintenance activities shall be considered to be no more than the estimated potential to emit for those activities that are represented in the MSS permit amendment application and subsequent associated submittals.
 - (2) The permit holder shall annually confirm the continued validity of the estimated potential to emit as represented in the MSS permit amendment application and subsequent associated submittals.
 - B. For each pollutant emitted during non-ILE planned maintenance activities (Attachment B), the permit holder shall do the following for each calendar month.

- (1) Determine the total emissions of the pollutant that result from such non-ILE planned maintenance activities in accordance with the methods listed in Special Condition No. 28.
- (2) Compare the pollutant's short-term (hourly) emissions during planned maintenance activities, as determined using one of the methods listed in Special Condition No. 28, to the applicable short-term planned MSS emissions limit in the MAERT.
- (3) Once the pollutant's emissions during planned maintenance activities have been measured for 12 months after the MSS permit amendment is issued, compare the rolling 12-month emissions of the pollutant, as determined using the monthly emission totals, to the applicable annual planned MSS emissions limit in the MAERT.
- 29. Emissions from planned MSS activities authorized by this permit shall be determined by the use of an appropriate method, including but not limited to any of following methods:
 - A. Use of a CEMS. If emission concentrations measured by the CEMS during MSS activities exceed the maximum value of the range over which the CEMS is certified, additional information must be provided to justify the use of the CEMS data in the MSS emission determination. The additional information may include use of default values that are shown to conservatively estimate the actual emissions.
 - B. Use of emission factors including but not limited to, facility-specific parameters, manufacturer's emission factors, and/or engineering knowledge of the facility's operations.
 - C. Use of emissions data measured (by a CEMS or during emissions testing) during the same type of planned MSS activity occurring at or on an identical or similar facility, and correlation of that data with the facility's relevant operating parameters, including, but not limited to, temperature, fuel input, or fuel sulfur content.
 - D. Use of emissions testing data collected during a planned maintenance activity occurring at or on the facility, and correlation of that data with the facility's relevant operating parameters, including, but not limited to, temperature, fuel input, or fuel sulfur content.

Aqueous Ammonia

- 30. The permit holder shall maintain prevention and protection measures for the NH₃ storage system. The NH₃ storage tank area will be marked and protected so as to protect the NH₃ storage area from accidents that could cause a rupture. The aqueous ammonia stored shall have a concentration of less than 20% NH₃ by weight.
- 31. In addition to the requirements of Special Condition No. 29, the permit holder shall maintain the piping and valves in NH₃ service as follows:
 - A. Audio, visual, and olfactory (AVO) checks for NH₃ leaks shall be made once every 24 hours when the kiln(s) are operating.
 - B. Immediately, but no later than 24 hours upon detection of a leak, following the detection of a leak, plant personnel shall take one or more of the following actions:
 - (1) Locate and isolate the leak, if necessary.
 - (2) Commence repair or replacement of the leaking component.

(3) Use a leak collection or containment system to control the leak until repair or replacement can be made if immediate repair is not possible.

Recordkeeping Requirements

- 32. The following records shall be kept and made available upon request to the TCEQ or any air pollution control program having jurisdiction. Records shall be maintained on a rolling five-year retention basis.
 - A. Alternative fuels:
 - (1) The source and date received;
 - (2) Amount received in pounds (or gallons for liquids);
 - (3) A description of the material;
 - (4) Estimated fuel HHV in Btu per pound (or Btu/gallon for liquids);
 - (5) Number of pounds fired (or gallons fired for liquids) and date/time fired;
 - (6) Percentage of TDF fed into the kiln system (kiln and precalciner) on a daily, HHV basis; and
 - (7) Percentage of total alternative fuel fed into the kiln system (kiln and precalciner) on a daily, HHV basis.
 - (8) Records as specified in Special Condition No. 6.D for other non-waste fuels.
 - B. Records to demonstrate compliance with the 5.3 tons per day NO_x combined kiln cap limit, 30-day rolling average, beginning on March 31 and ending on October 31 of each calendar year.
 - C. SO₂ scrubber records. For each scrubber:
 - (1) Uptime (in hours) as a percentage of kiln operating hours;
 - (2) Scrubbing liquid pH and flow rate recorded at least once per hour; and
 - (3) Downtime (in hours) of the raw mill when the scrubber is down.
 - D. Records of MSS, including the following, to demonstrate compliance with Special Condition Nos. 26 through 28 and the MAERT:
 - (1) Records of startup and shutdown of the kilns, including the date, time, duration, and emissions associated with those activities.
 - (2) Records of non-ILE planned maintenance activities and the associated emissions.
 - (3) Records of ILE planned maintenance activities and annual validations.
 - E. A copy of this permit.
 - F. A complete copy of the testing reports and records of the initial performance testing and initial determination of compliance completed pursuant to Special Condition No. 18 to demonstrate initial compliance.
 - G. Stack sampling results or other air emissions testing (other than CEMS data) that may be conducted on units authorized under this permit after the date of issuance of this permit.

- H. Records of NH₃ concentrations monitored or calculated pursuant to Special Condition No. 22 and the corresponding NH₃ emissions. Records of NH₃ AVO checks pursuant to Special Condition No. 30.
- I. Records of NO_x, CO, diluent gases (O₂ or CO₂), SO₂, THC, and Hg CEMS emissions data, as applicable, and continuous flow rate monitoring data to demonstrate compliance with the emission rates listed in the MAERT.
- J. Raw data files of all CEMS data including calibration checks and adjustments and maintenance performed on these systems.
- K. Records of VOC concentrations and VOC emissions calculated pursuant to Special Condition No. 21.
- L. All monitoring data and quality-assurance data shall be maintained by the source for a period of five years and shall be made available to the Executive Director of the TCEQ or designated representative upon request. The data from the CEMS may, at the discretion of the TCEQ, be used to determine compliance with the conditions of this permit.
- M. Records to demonstrate compliance with limits for PM, THC or OHAP, Hg, D/F, and HCl as specified in Special Conditions 4 and 21.
- N. The project authorized by the amendment application, PI-1 dated June 3, 2019, is determined not to be subject to major new source review by identifying projected actual emission rates for the following facilities potentially affected by the project provided the projected actual emission rates for the indicated pollutants are not exceeded. Actual emissions from the facilities shall be monitored, recorded and reports made in accordance 30 TAC § 116.127 for five years, as specified in 30 TAC § 116.127(b)(1).

EPN	Source Name	Pollutant	Projected Actuals (tpy)
62	Kiln Line 2, Bypass Baghouse, and Coal Mill Baghouse	NOx	1,102.00
62	Kiln Line 2, Bypass Baghouse, and Coal Mill Baghouse	SO ₂	1,767.23
62	Kiln Line 2, Bypass Baghouse, and Coal Mill Baghouse	VOC	219.00

Reporting Requirements

- 33. The holder of this permit shall submit two copies of quarterly monitoring (CEMS, CERMS, or CPMS) reports to the TCEQ Dallas/Fort Worth Regional Office in a format specified by the TCEQ Regional Office. All reports must be postmarked by the 30th day following the end of each calendar quarter and shall include the following information for each monitor:
 - A. The date and duration of time from the commencement to the completion of an event which resulted in excess emissions of any pollutant.
 - B. The date and time of the commencement and completion of each specific time period of excess emissions within that event.
 - C. The total time duration of excess emissions.

- D. The magnitude of the emissions, including the highest emission rate, and the average emission rate. All excess emissions shall be converted into the units of the permit. All conversion factors and equations shall be included.
- E. The nature and cause of any malfunction resulting in excess emissions and the corrective action taken and/or preventative measures adopted.
- F. The date and time identifying each period during which a CEMS or (or emissions measuring device acceptable by the EPA) was inoperative, except for zero and span checks, and the nature of the system repairs and/or adjustments which occurred during the downtime.
- G. When no excess emissions have occurred or the CEMS, CERMS, or CPMS have not been inoperative, repaired, or adjusted, such information shall be stated in the report.
- H. The total tons of SO₂, NO_x, and CO emitted during the quarter from Kilns 1 and 2 (EPNs 7* and 62*) prior to the installation of the Oxidation Control Systems; the total tons of NO_x, CO, SO₂, VOC, and Hg emitted during the quarter from the Kilns 1 and 2 following installation of the Oxidation Control Systems (EPNs 7* and 62*); the total hours of kiln operation; and the total hours of raw mill operation during the quarter.
- In addition to the other information required in this special condition, a summary of the excess emissions shall be reported using the form identified as Figure 1 in 40 CFR § 60.7.
- J. The reporting of excess emissions required by this condition does not relieve the holder of this permit from notification requirements of emission events as required by 30 TAC § 101.201 or notification of scheduled maintenance, startup, and shutdown activities as required by 30 TAC § 101.211.
- 34. For the purposes of reporting pursuant to Special Condition Nos. 1 and 32, excess emissions from the kiln stacks are defined as follows:
 - A. Excess emissions of NO_x are each daily period of operation during which the combined Kiln 1 and Kiln 2, 30-day rolling average emissions of NO_x, as measured and recorded by the CERMS, exceed the emission limitations of the MAERT. The 30-day rolling average is to be computed on a daily basis as the average of the hourly emissions on the 30th day and the preceding 29 daily average emissions (representing only those hours during kiln operation including all hours of planned maintenance, startup, and shutdown).
 - B. Excess periods of opacity are each six-minute period of operation during which the average opacity, as measured and recorded by Method 9 Test, exceed the opacity limitations of Special Condition No. 10.
- 35. The holder of this permit shall physically identify and mark in a conspicuous location all equipment that has the potential of emitting air contaminants as follows:
 - A. The facility identification numbers as submitted to the Emissions Inventory Section of the TCEQ.
 - B. The EPNs as listed on the MAERT.
- 36. The table below lists the maintenance-related sources or activities that are authorized by permits by rule (PBR) under Title 30 Texas Administrative Code (30 TAC) Chapter 106, or as De Minimis sources under 30 TAC § 116.119. This list is not intended to be all inclusive and can be altered at the site without modifications to this permit.

Source or Activity	Authorization
Application of aqueous detergents, surfactants, and other cleaning solutions containing not more than one percent of any organic compound by weight or containing not more than five percent of any organic compound with a vapor pressure less than 0.002 pounds per square inch absolute	De Minimis
Lab sampling and analysis	De Minimis
Manual applications of cleaning or stripping solutions or coatings for maintenance, including applications using brushes, cloth pads, sponges, droppers, tube dispensing equipment, or spray bottles and pump-up sprayers without aerosol propellants	De Minimis
Office cleaning activities	De Minimis
Yard work and landscaping	De Minimis
Pesticides, insecticides, and fumigation	De Minimis
Inorganic chemical usage	De Minimis
Application of aerosol-propelled organic liquids using hand-held devices for maintaining equipment and other facilities where usage is no more than four aerosol cans or 64 ounces per day on a 12-month rolling average basis	De Minimis
Application of lubricants (including greases and oils) without aerosol propellants	De Minimis
Blast cleaning equipment using only water as the cleaning media	De Minimis
Comfort air conditioning systems or comfort ventilation systems	De Minimis
Refrigeration system repair	De Minimis
Brazing, soldering, and welding	PBR 30 TAC § 106.227
Maintenance painting; maintenance chemicals	PBR 30 TAC § 106.263
Enclosed and outdoor dry abrasive blasting	PBR 30 TAC § 106.263
Hand-held or manually operated equipment used for buffing, polishing, carving, cutting, drilling, machining, routing, sanding, sawing, surface grinding, or turning of ceramic art work, ceramic precision parts, leather, metals, plastics, fiber board, masonry, carbon, glass, graphite, or wood	PBR 30 TAC § 106.265
Solvent cleaning, parts degreaser	PBR 30 TAC § 106.454
Emergency engines and portable small engines, over 12 months on site, including startup and shutdown	PBR 30 TAC § 106.511
Sludge management	PBR 30 TAC § 106.532
Organic chemical usage for water treatment	PBR 30 TAC § 106.532

^{37.} This permit does not include the facilities or operations at the site identified in the following table. Instead, these facilities or operations are authorized under standard permit (SP) by 30 TAC

Chapter 116 or permit by rule (PBR) by 30 TAC Chapter 106. This list is not intended to be all inclusive and can be altered at the site without modification to this permit.

Emission Sources - Maximum Allowable Emission Rates

Permit Number 8996

This table lists the maximum allowable emission rates and all sources of air contaminants on the applicant's property covered by this permit. The emission rates shown are those derived from information submitted as part of the application for permit and are the maximum rates allowed for these facilities, sources, and related activities. Any proposed increase in emission rates may require an application for a modification of the facilities covered by this permit.

(1) Emission point identification - either specific equipment designation or emission point number from plot plan.

(2) Specific point source name. For fugitive sources, use area name or fugitive source name.

(3) VOC - volatile organic compounds as defined in Title 30 Texas Administrative Code § 101.1

NO_x - total oxides of nitrogen

SO₂ - sulfur dioxide

PM - total particulate matter, suspended in the atmosphere, including PM_{10} and $PM_{2.5}$, as

represented

PM₁₀ - total particulate matter equal to or less than 10 microns in diameter, including PM_{2.5}, as

represented

PM_{2.5} - particulate matter equal to or less than 2.5 microns in diameter

CO - carbon monoxide

HAP - hazardous air pollutant as listed in § 112(b) of the Federal Clean Air Act or Title 40 Code

of Federal Regulations (CFR) Part 63, Subpart C

TRS - total reduced sulfur

 H_2SO_4 - sulfuric acid Speciated Compounds - See Attachment I

OHAP - organic hazardous air pollutants as defined in 40 CFR § 63.1341

Total OHAP - sum of concentrations of compounds of formaldehyde, benzene, toluene, styrene, m-xylene, p-xylene, o-xylene, acetaldehyde, and naphthalene as measured by EPA Test

Method 320 or Method 18, Appendix A, 40 CFR 60.

(4) Planned maintenance, startup, and shutdown (MSS) emissions are included.

(5) Compliance with annual emission limits (tons per year) is based on a 12-month rolling period.

(6) Demonstration of compliance with 30-day rolling limit begins on first day of stated period. The control period for the March 31 limit effectively begins on March 1. Reference: 30 TAC § 117.3123.

(7) Emission rate is an estimate and is enforceable through compliance with the applicable special conditions and permit application representations.

(8) The hourly emission limit is based on a 30-day rolling emissions average. A 30-day rolling average is generated for each day as the average of all the day's hourly emission data and the preceding 29 days of hourly emission data (representing only those hours during kiln operation including all hours of planned maintenance, startup, and shutdown). The gaseous monitoring data shall be reduced to units of the permit allowable emission rate in lb/hr, calculated as a 30-day rolling average at least once every week.

Date: April 6, 2021

ATTACHMENT I: Emission Sources - Maximum Allowable Emission Rates, Speciated Compounds

Emission Point	C N (0)	Air Contaminant	Emissio	n Rates
No. (1)	Source Name (2)	Name	lbs/hour	TPY (3)
		Ammonia (24-hour rolling average)	24.46
